 [README.md](#)

Database account at UVM

The purpose of this repository to help you get over the hurdle of setting up a database, it is not intended to cover everything. It is not intended to teach you PHP or MySQL. This is an example of using PHP and MySQL, though the process to connect with Java or Python will use the same credentials. You can see the [demo](#) on my site. This demo is setup on the silk server www-root (zoo would be similar).

I made a [help video](#) as well of this demo. Hopefully the setup goes as smoothly.

Uvm supports mysql databases that you can connect with php, python, java etc. You do not need to download anything to the server as its all setup already.

STEPS:
